Threadworms

Dear Parents,

It has been brought to my attention that that is an occurrence of Threadworms in the school. Please see below information from the Schools Health Advisor:

What are they?

Threadworms are tiny white worms, which live in the bowel. They are not harmful themselves but may be a nuisance. They are common, especially in children but can affect people of any age. They do not come from pets.

How do you know someone has them?

The most common symptom is itching around the back passage (anus) at night. This is because the worms are most active at night. This may lead to disturbed sleep or infection where the person has been scratching. Sometimes a child might wake in the night with severe perineal pain, which can be relieved by placing the child in a bath. An infected person may have no symptoms but sometimes worms can be seen in the stool or on toilet paper.

Are they infectious?

Yes. They can often be passed around within families. Threadworms leave the bowel at night and lay eggs on the skin around the back passage. The eggs frequently cause itchiness. Eggs may get onto the hands or under the fingernails of the person infected through scratching the itchy area and because of inadequate hand washing after using the toilet. The person may then pass them on to an uninfected person, for example when handling food. Eggs can also get onto carpets, bed linen, towels and flannels and into household dust and be passed to other people in this way.

What is the incubation period?

It may be between 2 and 6 weeks after contact with a source of infection before the life cycle is complete and eggs are laid in the newly infected person.

Is there any treatment?

Yes. There are medicines (powder, syrup or tablets) which will get rid of the worms and which the doctor can prescribe or which can be bought at the chemist. It is important that all people living in the same household are treated at the same time, as it is quite likely they will be infected as well. There are several things that can be done to help get rid of worms:

- A morning bath will remove eggs laid during the night
- Wash hands after using the toilet and before preparing food using nailbrushes when possible
- Disinfect the toilet seat and toilet handle or chain regularly
- Make sure everyone in the household uses their own towel and washcloth
- During treatment change the nightclothes, underwear and bed sheets of the infected person as often as possible.
- Vacuum the carpets often
- Keep the nails of the person with the infection short.

How soon can a child return to school?

No exclusion from school is necessary. Treatment is available and recommended.

Please visit <https://www.nhs.uk/conditions/threadworms> for more information.

Yours

Maureen Collier
